

# MADNESS GOPedal

There are countless upgrades available for your FIAT, why not start with something you can feel? The new GOPedal from 500MADNESS delivers exactly that experience.

Designed to reduce initial lag, the GOPedal connects to your stock pedal assembly and allows you to choose between settings for different driving styles. It advances your throttle's timing to give you a more direct response, and this throttle-control signal-amplifier is installed in minutes with basic tools.

It is not a permanent modification and can easily be returned to stock. It is a great way to get that racecar feeling without breaking the bank. We are so confident you'll love your GOPedal that we offer a 30-day money back guarantee.

Visit [MADNESSGOPedal.com](http://MADNESSGOPedal.com) for more information. \*TUV approved.

## MODES

\*Do not change modes while accelerating

**SPORT MODE**  
Throttle response slightly improves. Response can increase by up to 16%, making it suitable for everyday.

**SPORT PLUS**  
Improved throttle response plus optimal fuel consumption across RPM range. Perfect for merging and over-taking.

**ECO MODE**  
Designed for the stop-and-go traffic in the city, this mode provides improved lower end torque and optimal fuel consumption.

**OFF MODE**  
Returns to stock programming, recommended for rain, snow or ice covered roads.

## CURVE OPTIMIZATION

\*Do not change curve levels while accelerating

You can choose between six levels to optimize the acceleration curve for each of the programs. Do not change programs or curve settings while accelerating

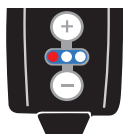

Curve +1

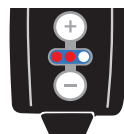

Curve +2

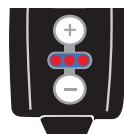

Curve +3

Curve -1

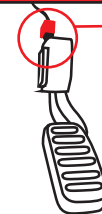

Curve -2

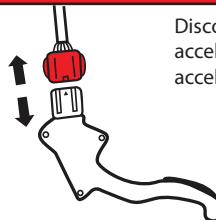

Curve -3

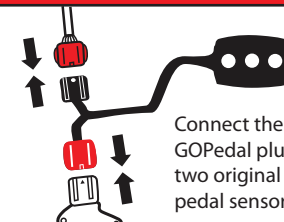

## INSTALLATION

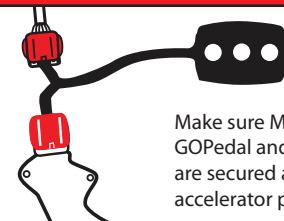

Locate accelerator pedal sensor on your FIAT. The sensor is located near the pedal, above the potentiometer.

Disconnect the accelerator from the accelerator pedal sensor.

Connect the MADNESS GOPedal plugs with the two original accelerator pedal sensors.

Make sure MADNESS GOPedal and all wiring are secured and clear of accelerator pedal.
